Mexican Toy Store Dashboard (Power BI)

📌 Project Overview

This project presents an **interactive Power BI dashboard** built using a Mexican Toy Store sales dataset. The dashboard is designed to analyze sales performance, customer behavior, and product trends, helping stakeholders make **data-driven business decisions**.

The project demonstrates end-to-end **data analytics skills** including data cleaning, data modeling, DAX measures, and effective visualization.

🎯 Objectives

- Analyze overall sales and revenue performance
- Identify top-selling products and categories
- Understand store-wise and city-wise sales distribution
- Track sales trends over time
- Provide actionable insights for business improvement

📂 Dataset Description

The dataset represents a fictional Mexican toy retail chain and includes:

- **Sales data** (Revenue, Units Sold)
- **Product details** (Product Name, Category)
- **Store information** (Store, City)
- **Time attributes** (Date, Month, Year)

The dataset is structured to support relational modeling and time-based analysis.

🔄 Data Preparation & Transformation (Power Query)

- Removed duplicates and handled missing values
- Standardized column names and data types
- Created derived columns for time analysis (Month, Year)
- Ensured data consistency across tables

🧩 Data Model

- **Fact Table**: Sales Details
- **Dimension Tables**:
    - Product
    - Inventory
    - Stores
    - Calendar

Relationships were created using **primary and foreign keys** to enable accurate filtering and aggregation.

📐 DAX Measures & Calculations

Key measures created using DAX include:

- Total Revenue
- Total Units Sold
- Average Sales per Transaction
- Month-over-Month (MoM) Growth
- Category Contribution %

These measures power the KPIs and interactive visuals.

📊 Dashboard Visuals

The dashboard includes:

- KPI Cards (Total Revenue, Units Sold)
- Bar Charts (Sales by Category, Product)
- Line Chart (Sales Trend Over Time)
- Donut / Pie Chart (Category Contribution)
- Store / City-wise Performance Analysis
- Interactive slicers for Date, Store, and Category

🔍 Key Insights

- Certain toy categories contribute the majority of revenue
- Seasonal trends significantly impact toy sales
- A small number of stores generate a high percentage of total sales
- Specific products consistently outperform others across regions

---

🧠 Skills Demonstrated

- Power BI Desktop
- Power Query (ETL)
- Data Modeling & Relationships
- DAX Measures
- Business-focused Data Visualization
- Analytical Thinking & Insight Generation
